

TODP V1 Product Requirements Document (PRD)

Version: 1.0

Status: FROZEN

Product Name: TODP (Working Name)

=====

1. Executive Summary

Purpose

TODP V1 is an evidence-first opportunity discovery platform that helps users discover opportunities available through existing systems.

The platform focuses on:

- Opportunity Discovery
- Traceability
- Auditability
- Provenance
- Explainability

The platform does not decide what users should do.

The platform discovers, ranks, explains, and traces opportunities that already exist.

Core Idea

Users frequently need access to:

- Events
- Workshops
- Scholarships
- Government Programs
- Courses
- Learning Opportunities
- Public Services

Information is fragmented across multiple systems.

TODP aggregates opportunities and preserves:

- Source
- Evidence
- Citation
- Timestamp
- Ranking Factors

for every recommendation.

Fundamental Principle

Every recommendation must be:

- Traceable
- Explainable
- Auditable
- Reproducible

No hidden recommendation logic.

No hidden ranking logic.

=====

2. Product Vision

Vision Statement

Create an evidence-based opportunity discovery platform where every recommendation can be traced back to observable data.

Long-Term Vision

Build an ecosystem where users can:

- Discover Opportunities (Online + Physical)
- Create Similar Opportunities
- Create New Opportunities

using observable evidence.

V1 Vision

V1 focuses on:

1. Opportunity Discovery
2. Evidence-Based Ranking
3. Source Traceability
4. Auditability
5. Registration Assistance
6. Calendar Assistance
7. Opportunity Creation Assistance

=====

3. Problem Statement

Current Situation

Information exists but is fragmented.

Examples:

- Scholarships
- Government Programs
- Courses
- Workshops
- Conferences
- Events

Users must search multiple systems separately.

Existing Platform Limitations

Current platforms often hide:

- Ranking Logic
- Recommendation Logic
- Source Provenance
- Audit Trails

Users cannot easily answer:

- Why was this recommended?
- Where did this information come from?
- When was it retrieved?

- How was it ranked?

Desired Outcome

Users should be able to:

- Discover opportunities
- Understand rankings
- Verify sources
- Review evidence
- Audit recommendations

=====

4. Product Scope

Included In V1

Opportunity Discovery

Support discovery of:

- Events
- Workshops
- Scholarships
- Government Programs
- Courses

Discovery Modes

Mode 1 – Discover Online

Examples:

- Online Courses
 - Webinars
 - Online Workshops
 - Online Programs
 - Live Events
-

Mode 2 – Discover Physical

Examples:

- Nearby Events
 - Nearby Workshops
 - Nearby Programs
 - Nearby Opportunities
-

Mode 3 – Create Something Similar

User selects an existing opportunity.

System helps the user understand:

- Tools
- Resources
- Steps
- Platforms

used to create similar opportunities.

Every recommendation must contain:

- Evidence
- Source
- Citation
- Retrieval Timestamp
- Traceability Metadata
- Audit Metadata
- Recommendation ID

All tools, resources, steps and platforms recommended by the system must be evidence-backed, logged, traceable and auditable.

Mode 4 – Create Something New

User identifies a problem.

AI assists discovery by:

- Asking Questions
- Retrieving Examples
- Retrieving Tools
- Retrieving Existing Systems

AI does not invent facts.

AI exposes evidence.

AI exposes examples.

AI exposes tools.

AI exposes existing systems.

AI may assist exploration but all recommendations must remain evidence-backed.

Human contributes novelty.

Discovery Scope Expansion Principle

By default, the platform discovers opportunities in expanding geographic scopes.

Level 1 – Local Jurisdiction

Examples:

- Local Events
- Local Workshops
- Local Scholarships
- Local Programs
- Local Organizations

↓

Level 2 – Regional / State Jurisdiction

Examples:

- State Government Programs
- State Scholarships
- State Universities
- State-Level Organizations

↓

Level 3 – National Jurisdiction

Examples:

- Government Programs
- National Scholarships
- National Universities
- National Organizations

Level 4 – International Jurisdiction

Examples:

- UN Programs
- International Scholarships
- International NGOs
- International Foundations
- Global Opportunities

Dynamic Discovery Rule

The hierarchy must not be hardcoded.

The hierarchy must be dynamically derived from:

- User Location
- Jurisdiction Hierarchy
- Authority Hierarchy
- Available Evidence Sources

Retrieval Rule

Discovery occurs before ranking.

The system first expands discovery:

Local → Regional → National → International

Then ranking is applied.

Ranking Engine

V1 ranking uses only measurable factors.

Ranking Score =

Distance Score

+ Time Score

+ Cost Score

No subjective ranking.

No behavioral ranking.

No psychological ranking.

Traceability Engine

Every recommendation must contain:

- Source
 - Citation
 - Retrieval Timestamp
 - Ranking Factors
 - Evidence Chain
-

Auditability

Every recommendation must be auditable.

Registration Assistant

Allowed:

- Auto Fill

Not Allowed:

- Auto Submit

User confirmation required.

Calendar Integration

Optional.

Requires user consent.

Used only for:

- Availability Checking
- Scheduling Assistance

=====

5. Non-Goals

Personal Analysis

Not Included:

- Personality Models
- Personality Scores

Psychological Analysis

Not Included:

- Mental State Analysis
- Therapy Features
- Behavioral Diagnostics

Subjective Scoring

Not Included:

- Happiness Scores
 - Fulfillment Scores
 - Purpose Scores
 - Meaning Scores
-

Human Evaluation

Not Included:

- Human Ranking
 - Human Worth Scoring
 - Human Value Scoring
-

Sponsored Systems

Not Included:

- Sponsored Content
 - Sponsored Rankings
 - Paid Placement
 - Advertising Boosts
- =====

6. Core Principles

Principle 1

Trace Everything

Principle 2

Audit Continuously

Principle 3

Trust Evidence

Principle 4

Explain Every Recommendation

Principle 5

Detect Hallucinations

Principle 6

Preserve Provenance

Principle 7

Recommend Aggressively

Recommendations are allowed.

Recommendations must be evidence-backed.

Principle 8

Never Recommend Without Evidence

No Evidence

=

No Strong Recommendation

Principle 9

AI Is Not A Source

AI may:

- Summarize (with evidence)
- Compare (with evidence)
- Explain (with evidence)
- Organize (with evidence)
- Generate Plans (with evidence)

All AI outputs must remain:

- Traceable
- Auditable
- Evidence-backed

AI must not:

- Invent Facts
 - Invent Citations
 - Invent Authorities
 - Invent Metrics
 - Invent Statistics
-

Principle 10

Human Creates Novelty

AI Provides Evidence

Principle 11

Recursive Evidence Principle

Every recommendation must eventually terminate at measurable evidence.

Supporting Evidence

↓

Observable Metrics

Original Source

Principle 12

Performance-Based Discovery

V1 contains:

- No Sponsored Content
- No Sponsored Ranking
- No Paid Placement

Ranking depends only on:

- Measurable Data
 - Traceable Sources
 - Auditable Evidence
-

Principle 13

No Recommendation Without Provenance

Every recommendation must contain:

- Recommendation ID
 - Source ID
 - Citation ID
 - Evidence Chain ID
 - Retrieval Timestamp
 - Calculation Method
 - Audit Status
 - Version
- =====

Platform Motto

Trace Everything.

Audit Continuously.

Trust Evidence.

Explain Every Recommendation.

Detect Hallucinations.

Preserve Provenance.

Recommend Aggressively.

Never Recommend Without Evidence.
